

2021 Healthcare Affordability State Policy Scorecard

Polling data repeatedly shows that healthcare affordability is the number one issue that state residents, on both sides of the political aisle, want their policymakers to work on. This scorecard identifies areas where Alaska is doing well and areas where it can improve. It reflects policies implemented as of Dec. 31, 2020.

STATE:

ALASKA

RANK:

42

out of 47 states + DC

TOTAL SCORE: 23.8 OUT OF 80 POSSIBLE POINTS

Alaska has much work to do to ensure wise health spending and affordability for its residents. According to SHADAC, 14% of AK adults could not get needed medical care due to cost as of 2019, and the share of people with other affordability burdens is far higher. While AK's high uninsurance rate (12.2%) may be a factor, healthcare is increasingly unaffordable largely due to high costs that affect everyone. According to the PCE, healthcare spending per person in AK grew 35% between 2013 and 2019, totaling \$11,337 in 2019.*

	POLICY SCORE	OUTCOME SCORE	RECOMMENDATIONS
CURB EXCESS PRICES IN THE SYSTEM 	0.0 OUT OF 10 POINTS As is common in many states, AK has done little to curb the rise of healthcare prices.	0.1 OUT OF 10 POINTS High private prices are one factor driving costs. AK is among the most expensive states, with inpatient private payer prices at 240% of Medicare prices. Ranked 48 out of 48 states, plus DC.	Year-over-year increases in healthcare prices overwhelmingly drive state healthcare spending. AK should consider creating a robust APCD, strong price transparency requirements, establishing a health spending oversight entity and creating health spending targets.
REDUCE LOW-VALUE CARE 	0.7 OUT OF 10 POINTS AK has not enacted meaningful patient safety reporting. 87% of hospitals have adopted antibiotic stewardship. AK has not yet measured the extent of low-value care being provided.	8.0 OUT OF 10 POINTS AK has less low-value care than the national average. Ranked 5 out of 50 states, plus DC.	AK should consider using claims and EHR data to identify unnecessary care and enacting a multi-stakeholder effort to reduce it.
EXTEND COVERAGE TO ALL RESIDENTS 	6.0 OUT OF 10 POINTS Medicaid coverage for childless adults extends to 138% of FPL. No immigrant populations can access state coverage options. AK uses reinsurance to reduce costs in the non-group market.	4.0 OUT OF 10 POINTS AK is among the states with the most uninsured people—12% of AK residents are uninsured. Ranked 45 out of 50 states, plus DC.	AK should consider coverage options residents earning too much to qualify for Medicaid, like premium subsidies, a Basic Health Plan, a Medicaid buy-in and a public option. Also consider coverage options for low-income immigrants that do not qualify for Medicaid/CHIP, as well as adding affordability criteria to rate review.
MAKE OUT-OF-POCKET COSTS AFFORDABLE 	0.0 OUT OF 10 POINTS AK has not enacted any of the policies that may protect state residents from high out-of-pocket costs.	5.0 OUT OF 10 POINTS 14% of AK adults could not get needed medical care due to cost. The share of people with other affordability burdens is far higher.	AK should consider a suite of measures to ease consumer burdens, such as: protections against short-term, limited-duration health plans; surprise medical bill protections not addressed by the federal No Surprises Act; and waiving or reducing cost-sharing for high-value services.

APCD = All-Payer Claims Database CHES = Consumer Healthcare Experience State Survey CMS = Centers for Medicare and Medicaid Services EHR = Electronic Health Records FPL = Federal Poverty Level PCE = Personal Consumption Expenditure (Healthcare PCE measures spending growth among households as well as nonprofit, commercial and government hospitals/nursing homes) SHADAC = State Health Access Data Assistance Center SMB = Surprise Medical Bill STLD = Short-Term, Limited-Duration

ALASKA NOTES

Methodological Notes:

State rank reflects the weighted sum of the policy and outcome scoring components. A lower state rank number (i.e. close to 1) reflects a higher overall score and better performance when compared to other states. For a complete discussion of methodology, please see healthcarevaluehub.org/affordability-scorecard/methodology.

Curb Excess Prices in the System:

In order to receive credit for price transparency tools, a state's tool had to be public-facing, searchable by specific procedure and hospital and show the negotiated rate paid by insurance plans/patients (not chargemaster rate). Alaska did not have a tool that met this criteria.

AK has none of the four policy elements measured for this category. The AK Senate's Health and Social Services Committee heard testimony on the creation of an APCD in 2021.

Reduce Low-Value Care:

According to the Johns Hopkins Overuse Index created using Medicare data, AK's overuse of low-value care is -1.2 standard deviations below the national average, which is likely a good thing, assuming they are also delivering appropriate care.

Data on patient safety reporting is not available for Alaska.

Improper use of antibiotics is another type of low-value care. Antibiotic stewardship is the effort to measure and improve how antibiotics are prescribed by clinicians and used by patients—states were scored on what share of their hospitals follow the CDC's stewardship program.

Extend Coverage to All Residents:

Alaska implemented a reinsurance program under a 1332 State Innovation Waiver. The waiver was approved in 2017 and has been in effect since 2018.

AK offers no coverage options for immigrant populations.

AK has effective rate review as classified by CMS but does not incorporate affordability criteria into rate review.

Make Out-of-Pocket Costs Affordable:

High-deductible health plans create barriers to care for many families. According to SHADAC, the average family deductible among employer insurance plans in AK rose 58% between 2013 and 2019, totaling \$3,626 in 2019. States should consider exploring new policies to reduce financial barriers to care for people with high-deductible health plans, although there are limits to how much states can influence employer insurance and Medicare.

In response to rising insurance costs, some people turn to STLD health plans, which offer lower monthly premiums compared to ACA-compliant plans. However, these policies offer less coverage, can discriminate against people with pre-existing conditions and pose significant financial risks for consumers. States received credit depending on how much they limit or protect against these plans.

The federal No Surprises Act prohibits surprise medical billing in most plans effective January 2022. However, it does not cover ground ambulances which often result in surprise bills. States can still implement protections in this area—68% of ground ambulance rides in AK charged to commercial insurance plans had the potential for surprise medical billing (AK had a small sample size [222] compared to other states, so interpret percentage with caution).*
